

Printing from Windows PC

Part One: On PC

Printing from a PC isn't much different using PaperCut. You will print from various apps and either select Find-Me-Colour or Find-Me. Often you can select more settings for paper size, etc.

Part Two: On Photocopier

Log in to PaperCut using username and password (Computer log on credentials) or use ID number (employee number) or if logged in press **Release**.

Select items to print and press **print** button. You can also delete items from print list.
